

# Gut feelings questionnaire in real settings: a feasibility study protocol

Barais M, Hauswaldt J, Czachowski S, Liétard C and Stolper E and Van Royen P

## GFQ

- 10 items questionnaire based on the consensus statements defining the Gut Feeling
- tested through case vignettes
- never evaluated in real settings by GPs during office hours.
- How feasible is it to use the gut feeling questionnaire in daily practice in primary care?

## Design

- after each consultation for a new reason for encounter each morning during 8 days.
- 20 GPs, 8 questionnaires per GP

## Quantitative

- average time of filling out estimated by the GP
- disruption of daily routine (4 point scale)
- additional workload due to the fulfilment of the questionnaire (4 point scale)

## Qualitative

- “What do you think about the questionnaire?”
- “What elements should be improved?”
- Content analysis of verbatim

Which experience regarding feasibility studies would you like to share?  
How to integrate questionnaire administration in daily practice?
